

CG Lab Guide for Mac User

Method 1: Using Parallels Desktop (Paid)

Step 1: Download and Install

<https://www.parallels.com/products/desktop/download/>

Just like install other Mac external software.

Step 2: 14-Day Free trial or Paid subscription

<https://www.parallels.com/products/desktop/buy/?full>

Select *Student* and then you can choose one to purchase.

Also, the official provides a 30-day unconditional refund service.

Step 3: Create a Windows 11 VM

Allocate storage space and perform other operations according to the instructions when you try to create VM. Additionally, you can also download the system image yourself to configure it, and there are many guidelines on CSDN.

Step 4: Download Visual Studio in VM and follow Lab 1 instructions

Method 2: Using VMware Fusion (Free)

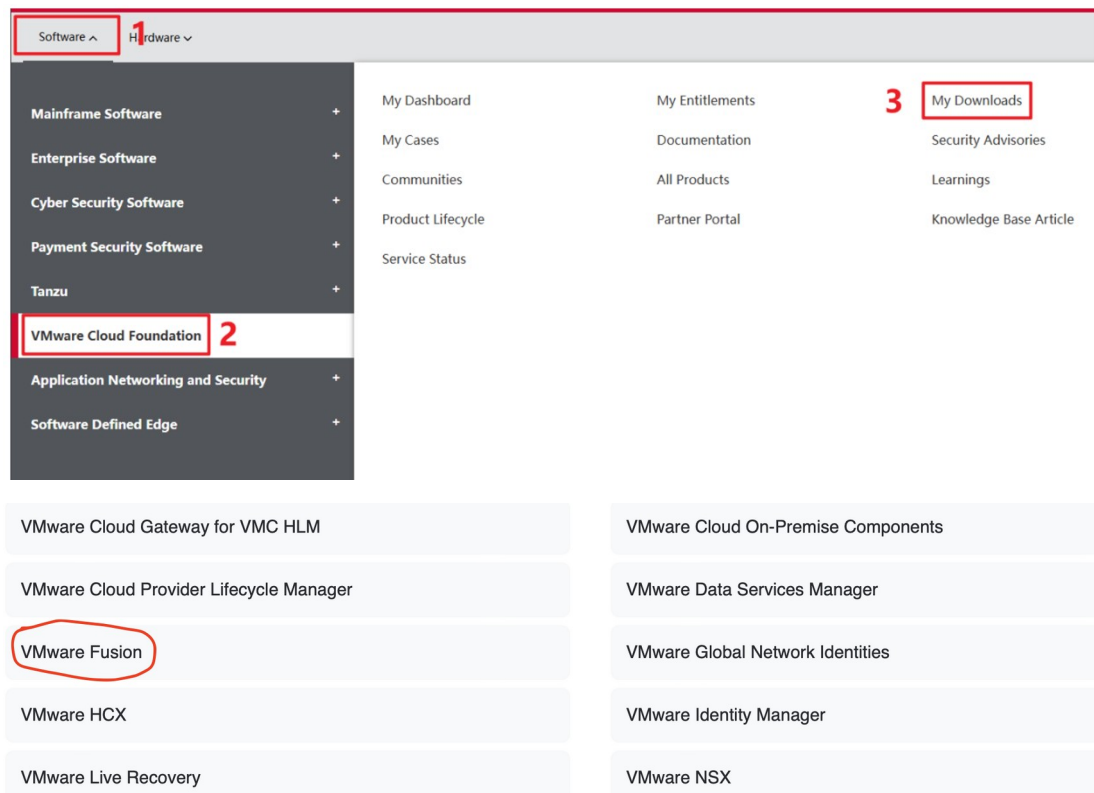

Step 1: Create a Broadcom account

<https://support.broadcom.com>

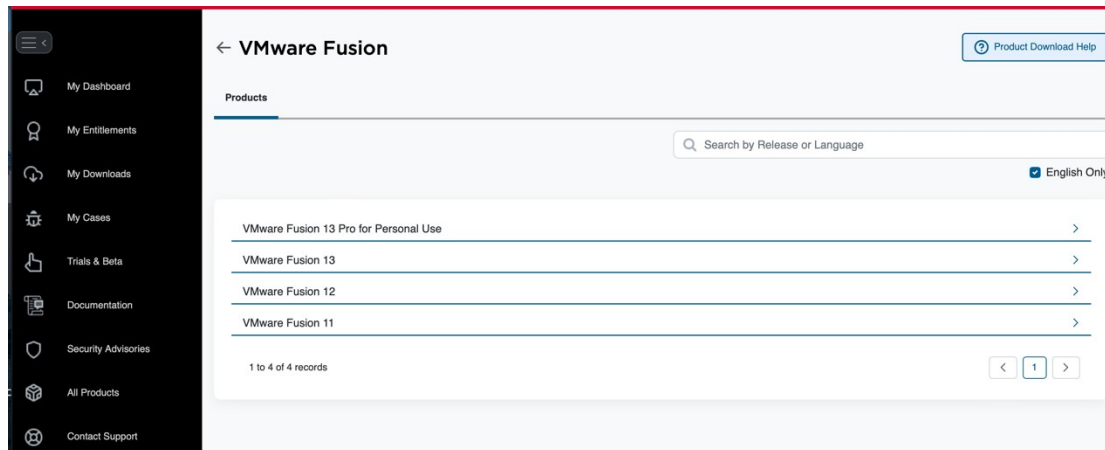

This is for download the VMware Fusion software because we need to download it through Broadcom Support Portal but not VMware official website Since May 5, 2024.

Step 2: Download and Install

Follow the instructions below to enter the software download library and find the VMware Fusion section.

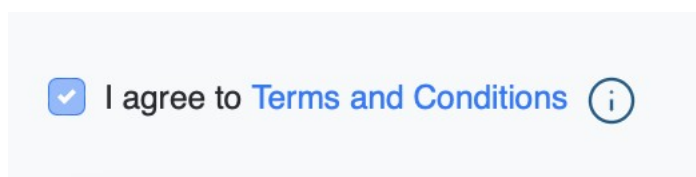

After finding the VMware Fusion section, select VMware Fusion Pro for Personal Use section and choose the latest version (now is 13.6.1).

VMware Fusion 13 Pro for Personal Use

Release	Release Level Info	Language
13.6.1	524470	English
13.6	522387	English
13.5.2	520445	English
13.5.1	520293	English
13.5	520294	English
13.0.2	520295	English
13.0.1	520350	English
13.0.0	520351	English

Then, click and confirm the “Agree Terms and Conditions” above and then click the download button.

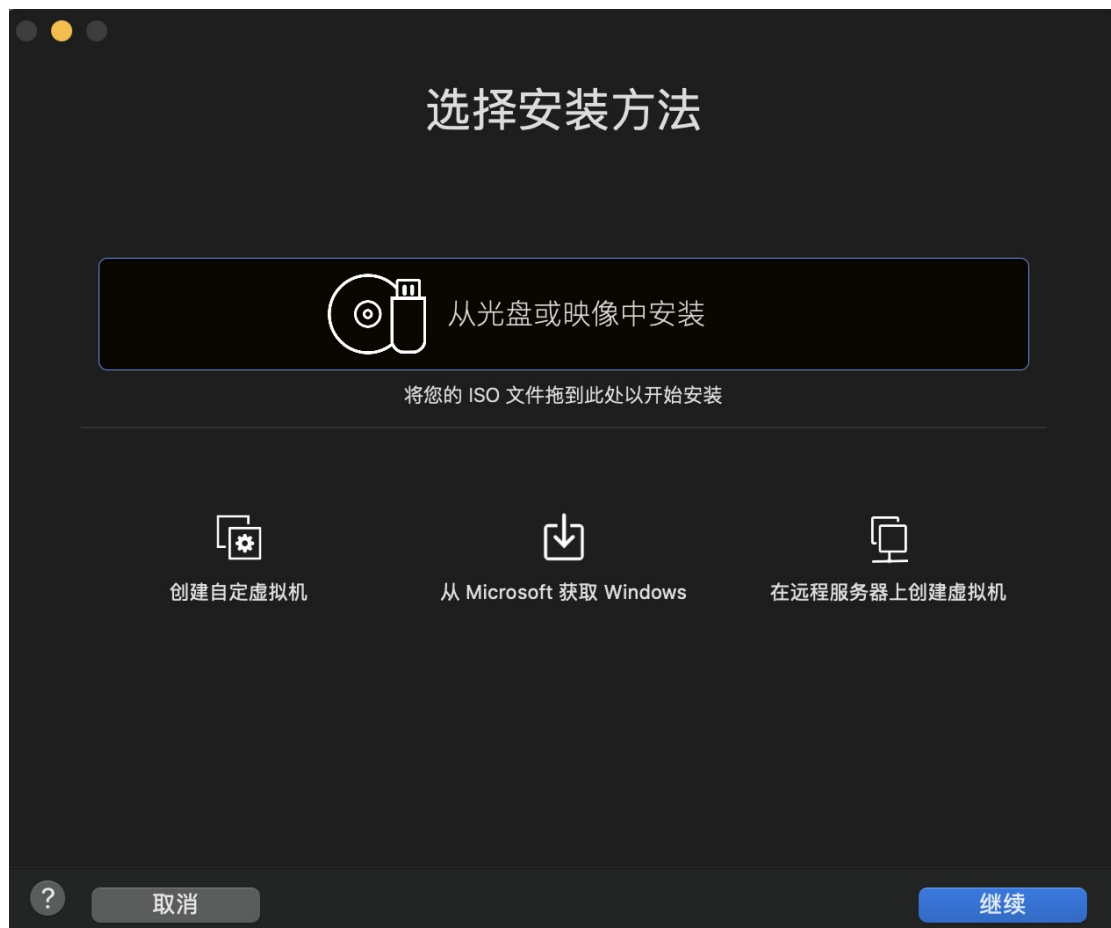

VMware Fusion Pro for Personal Use (For Intel-based and Apple silicon Macs)		Release 13.6.1	Release Level Info 524470	✓
File Name	Last Updated	SHA2	MD5	
VMware Fusion Pro for Personal Use (For Intel-based and Apple silicon Macs) VMware-Fusion-13.6.1-24319021_universal.dmg(539.78 MB) Build Number: 24319021	Oct 08, 2024 06.13AM	6a9faee5c0a2573598704a09864d6072a0685269707c186dfc8ebde4551ee5c3	13304cbc30a0849a34cf1f7ea4065978	

Finally, you may need to supplement required personal

information according to the prompts, and then the download will be successfully completed.

Step 3: Create a Windows 11 VM

Allocate storage space and perform other operations according to the instructions. Also, you can create your Windows 11 VM as needed based on your own system image or use the official built-in Windows 11 VM.

Also, there are many guidelines on CSDN.

Step 4: Download Visual Studio in VM and follow Lab 1 instructions

Note: It is more recommended to use Parallels Desktop as it is more convenient and efficient, but the only drawback is that there is no personal free version available. Additionally, I haven't fully verified whether the Windows 11 virtual machine on VMware Fusion can run all the contents of Lab 1 perfectly, but I believe it should have the same effect as Parallels Desktop. Finally, my MacBook is the M1 chip version.
